Communication Lights

MAXIMIZE DOCK SAFETY!

LED communication lights signal safety on the loading dock!

Tri Lite has long been an industry leader of visual communication signals. Now, we are introducing TopDok, an improved LED communication system that expands Stop & Go coverage to the top of an interior dock door. TopDok's LED corner light set attaches above the door opening, clearing the header and track by connecting to any length 1/2" NPT-type stand-off pipe for a custom fit.

The units integrate with professionally installed dock restraints, enhancing existing vehicle restraint controls with improved visibility and safety. Bright LEDs are spread across the product's light-board surface and are protected by a rugged polycarbonate housing. When a loading vehicle is properly secured, the LEDs change from red to green, indicating to dock personnel that it is safe to enter.

Choose between a set of corner lights that are installed above the dock door header, or a singular linear light mounted beside the door opening. Use both for full-coverage signaling that reduces the risks of accidents.

TopDok shown with Tri Lite's dock light and lift-truck warning light.

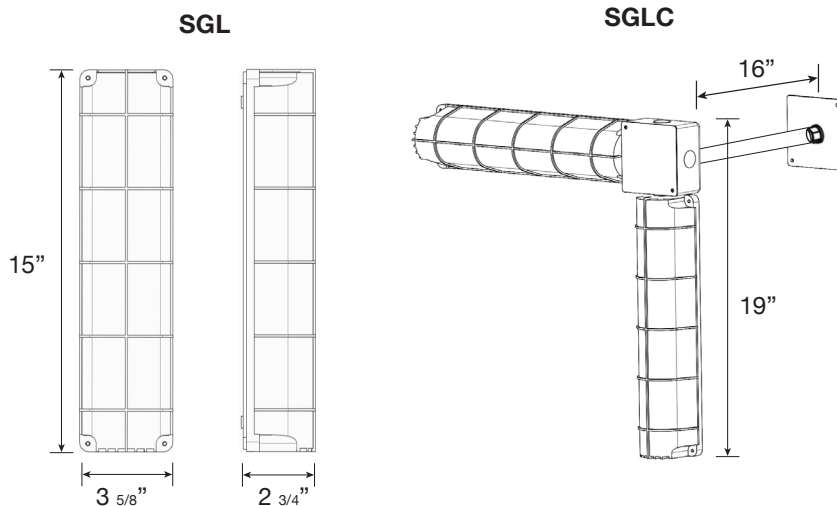

Stop and Go LED Linear Light

This single red/green unit can be used inside or outside of a loading dock door. When installed outside, it fits easily between close sitting docks. Combine the linear light with TopDock's corner set for maximum-coverage signaling. The unit works with a user supplied remote switch to activate red or green signals.

- 33 bright red/green LEDs make this our brightest stop and go yet!
- Reduce replacement costs and down time – 5 year limited warranty
- Use for low voltage applications: 12VAC/VDC

Physical Specifications

Key Features

- Reduces blind spots.
- Long-life LEDs eliminate replacement costs.
- High impact polycarbonate housing.
- Improved visibility in the warehouse.
- Made in the USA.

Technical Specifications

- 12VAC/VDC
- Linear unit weighs 2 pounds
- Corner set weighs 8 pounds
- 16" Stand-off pipe included

TopDok turns from red to green when a loading vehicle is properly restrained.
